SunSmart Choice

The Cancer Association of South Africa (CANSA) has created the CANSA SunSmart Choice Seal to help consumers identify sunscreens that comply with prevailing SABS and international standards; are verified by approved independent testing laboratories; and promote responsible sunning habits.

Legislated sunscreen standards are regularly upgraded in keeping with ongoing research. The present CANSA Seal qualification requirement is a sun protection factor (SPF) 20 minimum and 50+ maximum, with approved broad-spectrum UVA / UVB protection ratios.

Be on the look-out for sunscreen with the CANSA Seal... it's the sun-smart thing to do!

SMART CHOICES CAN HELP REDUCE THE RISK OF CANCER
