

Report No: CA_CANSA_140506

6 May 2014

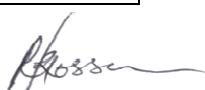

Scope: Analysis of water samples to obtain baseline data.

Water samples were supplied by CANSA. Samples were acidified to pH < 2 prior to inductively coupled plasma mass spectrometry (ICP-MS) analysis, which was performed on an Agilent 7700 system. Samples were filtered prior to ion chromatographic analysis (IC) which was performed on a Waters Breeze HPLC system using an IC Pak A column with Borate Gluconate buffer.
